

# PDM-WebConnector.

System and Process Integration with SOA Technology.

T-Systems

Corporate solution for System Integration and SOA-enabling of existing PLM and Legacy systems.

The PDM-WebConnector is an approved configurable, scalable and high-performance SOA enabler for a uniform web services-based access across the enterprise.

## Characteristic features.

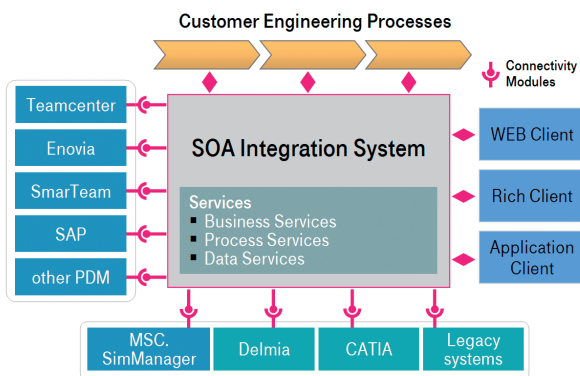

- Providing data and information as basic and process web services
- Inquiry in PLM and legacy systems with standard and customized methods (e.g. Teamcenter Enterprise-based)
- Support of the latest security standards
- Monitoring tool for permanent system supervision
- Administration tool for easy administration of users, rights and configurations

## Plan – Build – Run.

T-Systems consults customers on questions regarding PDM-WebConnector and integration into existing solutions. T-Systems adapts the installation into the process and architecture at the customer's site to the scale desired.

## Business Benefits.

- Data is provided to the user or to a client application directly from the legacy system over the PDM-WebConnector, so no data redundancy exists
- For all applications, there is a uniform interface over web services
- Platform and language independence by using the latest standards for data exchange like XML and SOAP
- Simple and cost-efficient operation by using a standard application server as basis
- Single Point of Access to the backend/legacy systems
- High security of data and transactions
- Simple customizing is possible by adapting the XML-files
- Flexible mapping for internal data representation of backend systems
- Support of standard collaboration formats (e.g. OMG standard PLM Services), vendor specific formats (e.g. PLM XML) as well as customer specific formats (e.g. company specific schemas)

## All from one source.

With the PDM-WebConnector T-Systems delivers a module, which fits in seamlessly into an existing system architecture, making the legacy systems (e.g. PLM systems) Web compliant and integrating them into consisting applications and web applications.
